

JOIN US FOR THE

2020 BRITEhack

**attention:
engineers,
developers,
designers
& students**

Bring your ideas to our second energy-focused civic hackathon, BRITEhack, on January 31st. Meet new people, leverage technology and your collective skills, solve an energy problem and make a positive impact in the community. The teams with the best solution for each issue receive \$1,000 and their solution may be executed.

two problems await you:

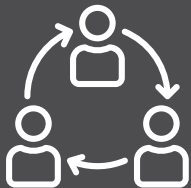

1.

Warren's St. Joseph's Hospital is burdened by the challenge of energy costs, reliability and disruption. Find creative solutions for the hospital to reduce reliance on the grid and optimize efficiency.

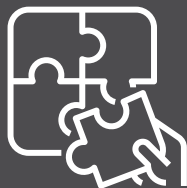

2.

The Trumbull Metropolitan Housing Authority incurs large expenses from burst pipes when residents move out without notifying TMHA. Design a sensor that can determine occupancy status across a variety of property types.

the hackathon process:
