

BRITE ENERGY LABS

WET LAB TESTING

The BRITE Wet Lab provides researchers with common tools and resources necessary for solution prep and synthesis. Suitably stocked with the basic amenities such as glassware, analytical balances, deionized water, and inert gas supply, the facilities will suit the needs of many research applications. To ensure the safety of researchers, hazardous materials or solutions can be handled within the fume hood environment, minimizing, or otherwise eliminating the potential for exposure to harmful fumes, particulates, and dust. As well, a Terra Universal Critical Environment glovebox is available for preparing or handling sensitive materials or equipment under a controlled atmosphere. In the event of specialized handling or synthesis, our personnel can provide guidance or explicit instruction to best develop the safest and most appropriate procedure to fit your needs. And should sample characterization outside the capabilities of the BRITE resources be required, our network of supporting labs can assist with many common analytical techniques.

WHAT MAKES US BRITE

BRITE Energy Innovators is powering the future of energy by enabling people to gather, connect and create. As a national energy incubator, we empower tech startups with the guidance, resources, and connections to bring new ideas to life and grow their companies.

We have assisted over 480 New Energy tech startups with mentorship, funding assistance, and over \$200 million in investor connections. By fusing experienced entrepreneurs in residence, advanced equipment in BRITE Energy Labs, and community coworking spaces in Downtown Warren, Ohio, we're creating opportunities for everyone.
